Model Schooling:

We were asked to create a model of the buildings at Lundavra State School. The materials we used included balsa wood and quick dry wood glue. The utensils used were Stanley knives (the teachers were only allowed to use these), scissors, newspapers and paintbrushes. To start off with we had to draw a plan of our building and decide how we were going to make it. It was difficult to hold things in place make sure that it does not break. It was fun to make with our friends.
