This term we made symmetrical faces out of coloured cardboard and this is how we made it.

The students chose two pieces of coloured cardboard
The students folded one piece of the cardboard in half
The students drew half a face on the cardboard
The teacher used a stanley knife to cut out the face with the back half with it
The students glued half of the face onto the second piece of coloured cardboard
The students glued the outside of the face onto the other side of the second piece of the coloured cardboard
The students let the glue dry
The students did the same thing on the back of the second piece of cardboard

PS. There were no left over bits of cardboard
